What are permalinks?

Permalinks are static hyperlinks to a journal article or eBook title within a specific database. They may also be called:

- persistent links
- document links
- durable links
- permanent links
- bookmarks

If you want to share direct links to an e-journal title or eBook in your collection, do not copy and paste a URL directly from a web page address bar to share with your patrons. These dynamic URLS are unlikely to take you directly back to the page you are looking for when you want to access an article or eBook title at a later date because most of these URLs contain specific session information. Check out the instructions on how to create a permalink for each of the MDLP resources.

Remote Access

When you are creating a permalink you will often need to add your library proxy information to the URL. The proxy information allows remote users to access the database. Most users opening links from your Twitter account will be remote users and not using the computers inside your library.

There is a list of MDLP partner proxy addresses on the next page. You can also locate proxy information yourself by copying a database URL from your library that provides patrons remote access. Proxy information is located at the start of the URL. Here is an example from the Resource Centre for Sport, Culture, and Recreation:

- remote access URL to NoveList Plus: **http://ezproxy.parksandrec.lib.sk.ca/login?url=http://search.ebscohost.com/login.aspx?authtype=ip,cpid&profile=novplus**

- proxy information from the URL: **http://ezproxy.parksandrec.lib.sk.ca/login?url=**

MDLP Partner Proxy Addresses

If your library isn't listed here, speak to the Electronic Resource Librarian at your institution.

EBSCO databases in the MDLP collection

Auto Repair Reference Center
Small Engine Repair
eBooks on EBSCOhost
NoveList K- 8 Plus
NoveList Plus

The EBSCO databases subscribed to by the MDLP do not fit into a common pattern for permalink creation. In some cases, there is no option to create a permalink.

Creating a permalink/persistent link

Instructions for Small Engine Repair and eBooks on EBSCO

1. Open the full-text article, service manual record or book title
2. Click on the *link* icon on the right side of the screen.
3. Copy the URL provided. This URL will not have your proxy information listed. You will need to add that information at the front of the URL

Permalink
http://search.ebscohost.com/login.aspx?direct=true&db=s9h&AN=24310592&site=serrc-live
ENGINE DESIGN FUNDAMENTALS.
SERVICE MANUAL
FUNDAMENTALS
ENGINE DESIGN FUNDAMENTALS
ENGINE OPERATING PRINCIPLES
The engines used to power many items of power equipment in use today are basically similar. All are technically known as "Internal Combustion Reciprocating Engines."
The source of power is heat formed by the burning of a combustible mixture,
(2) COMPRESSION; (3) IGNITION; (4) EXPANSION (POWER); and (5) EXHAUST.
Four-stroke Cycle
In a four-stroke cycle engine operating on the Otto Cycle (spark ignition), the five events of the cycle take place in four strokes of the piston, or in two revolutions of the engine crankshaft.
stroke. As the piston starts on its first upward stroke, the mechanically operated intake valve closes and, because the exhaust valve is closed, the fuel-air mixture is compressed as in view "B."
Just before the piston reaches the top of its first upward stroke, a spark at the spark plug electrode ignites the compressed fuel-air mixture. As the engine crankshaft turns past top center, the

EXAMPLE: Creating a link for Saskatchewan Polytechnic users.

1. Permalink URL from EBSCO:
   http://search.ebscohost.com/login.aspx?direct=true&db=s9h&AN=24310592&site=serrc-live

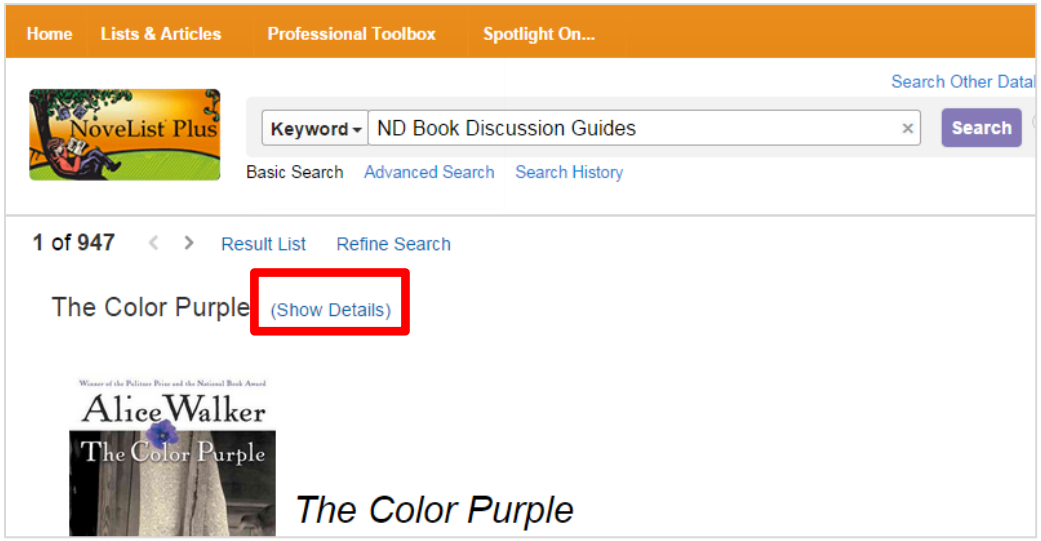
2. Proxy information for Saskatchewan Polytechnic: **https://ezproxy.siast.sk.ca/login?url=**

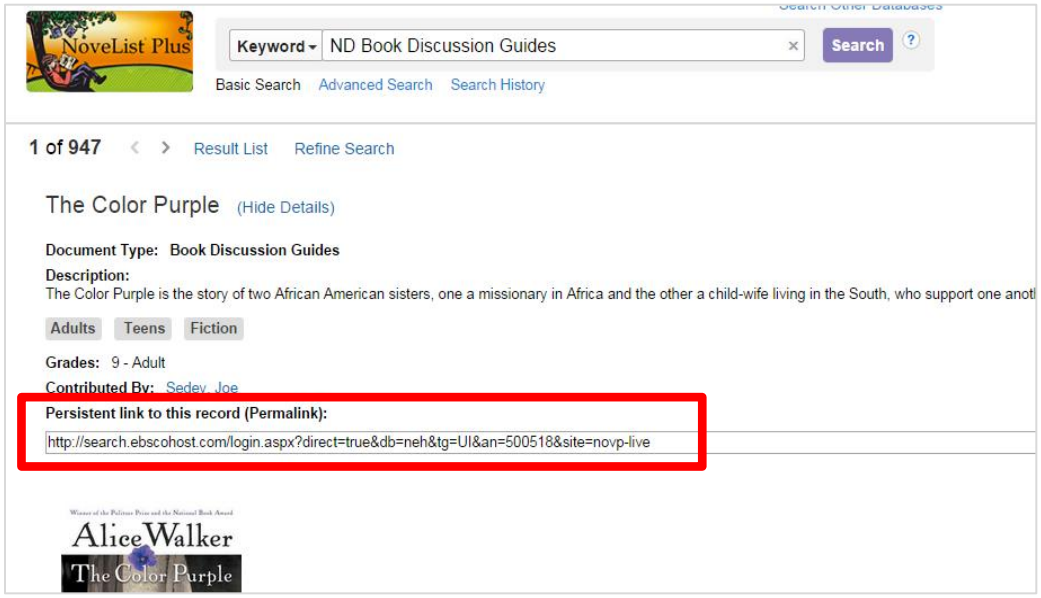
3. Put these two URLs together to create a permalink with remote access:
   https://ezproxy.siast.sk.ca/login?url=http://search.ebscohost.com/login.aspx?direct=true&db=s9h&AN=24310592&site=serrc-live

NOTE: Small Engine Repair is not actually in the core MDLP collection. It is a supplemental product but all libraries currently have access to it.

NoveList K- 8 Plus & NoveList Plus

1. Open a full-text article or book description
2. A persistent link (permalink) to this record should be visible, copy the URL provided
    - This URL will not have your proxy information listed. You will need to add that information at the front of the URL
3. If the persistent link is not visible, select *Show Details*. More information about the record, including the persistent link, will appear.





EXAMPLE: Creating a link for RCMP Resource Centre users.

1. Persistent link from EBSCO: **http://search.ebscohost.com/login.aspx?direct=true&db=neh&tg=UI&an=500518&site=novp-live**

2. Proxy information for the RCMP Learning Centre: **http://ezproxy.rcmp-grc.lib.sk.ca/login?url=**

3. Put these two URLs together to create a permalink with remote access: **http://ezproxy.rcmp-grc.lib.sk.ca/login?url=http://search.ebscohost.com/login.aspx?direct=true&db=neh&tg=UI&an=500518&site=novp-live**

Exceptions to the Rule

Auto Repair Reference Center will not allow you to create a permalink to an article. Use the database landing page/homepage URL in your tweets.

Copy and paste the URL from your library website. You need to include your library/library region proxy information before the URL. The proxy information should precede the database URL to allow your patrons remote access.

EXAMPLES: University of Regina and Palliser Library Region

- **http://libproxy.uregina.ca:2048/login?url=**http://search.ebscohost.com/login.aspx?authtype=ip,uid&profile=autorefctr

- **http://ezproxy.palliser.lib.sk.ca/login?url=**http://search.ebscohost.com/login.aspx?profile=autorefctr

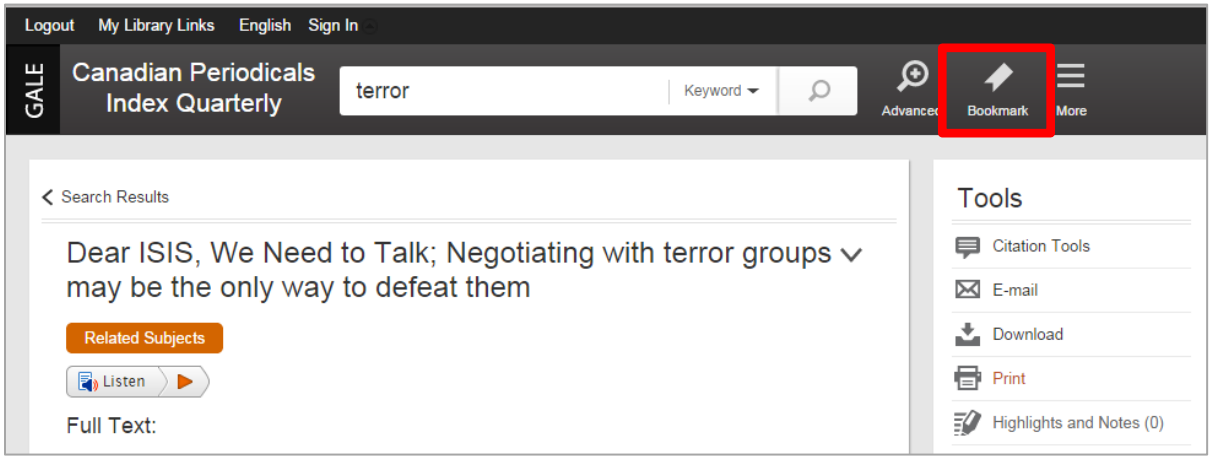
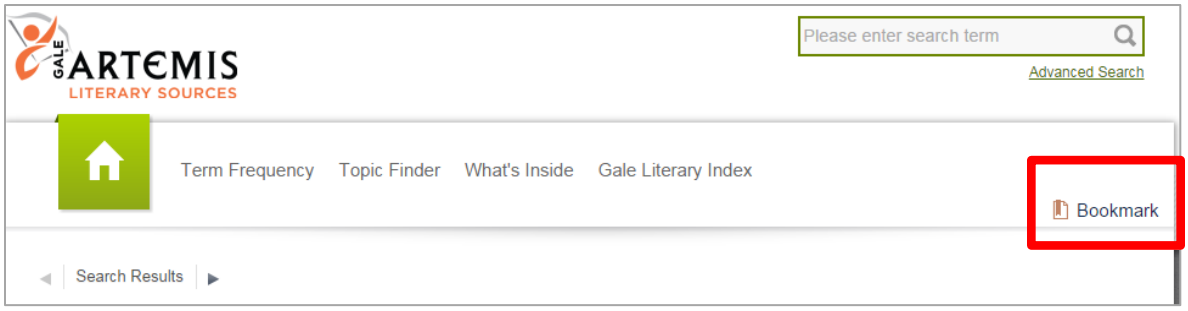
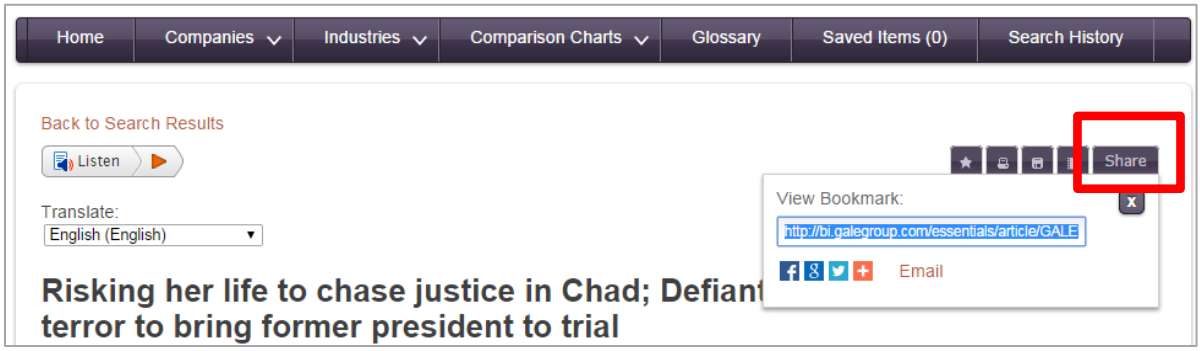
Creating a permalink/bookmark

1. Open a full-text article or eBook link
2. Click *Bookmark* or *Bookmark this Document*
3. Copy the URL provided
    - You <u>do not</u> need to add any additional proxy information. Your library account ID is automatically included in the bookmark link. The account ID is used in place of your proxy address.
4. If you don't see a *Bookmark* icon, select the *Share* button to find the Bookmark option

Here are a few common examples of the bookmark or share icon.







Exceptions to the Rule

Health and Wellness Resources Centre will not allow you to create a permalink to an article. Use the database landing page/homepage URL in your tweets.

Copy and paste the URL from your library website. You need to include your library/library region proxy information before the URL. The proxy information should precede the database URL to allow your patrons remote access.

EXAMPLE: Regina Public Library and Parkland Library Region

Giant Asteroid Impact Scars Discovered in the Warburton Basin: Year In Review 2015
Primary Contributor: Andrew Glikson
ARTICLE from the Encyclopædia Britannica
Get involved
Share
Like
Compared with the heavily cratered surfaces of the inner terrestrial planets (Mars, Venus, and Mercury)—and the Moon, with its huge basalt-flooded impact basins, or lunar maria—Earth's surface, with its large oceans and continental plateaus, appears relatively quiet from space. Nature, however, hides secrets well, and in 2015 Earth scientists from Australia reported geophysical anomalies in that country's Warburton Basin suggesting the presence of scars of impact structures that could be among the largest ever found.
Previous Warburton Basin Studies
Evidence of impact events that struck the oceans has been mostly eliminated as the oceanic crust has been continuously recycled and destroyed by subduction under the continents and island arc-trench systems. Where impacts occurred in mountainous areas, their scars have been eliminated through uplift and erosion. It is mainly in cratons (the relatively stable continental sectors) that impact craters and their underlying elastic rebound dome structures have been preserved. The underlying dome structures form in much the same way that a pebble falling into a pond creates a transient depression, with circular ripples and an upwa
rebound of water at the centre.
Since the mid-20th century, geophysical exploration for oil and gas—involving gravity surveys, studies of seismic reflection and refraction, deep seismic transects and passive seismic tomography, and airborne
